

# Cadac **Organice** Solution Accelerator

*Accelerate your SharePoint  
document environment!*

*Accelerate your engineering document management implementation by automatically deploying SharePoint and Organice settings and tools, create sites automatically with site provisioning, build on best practice templates, and enhance your document environment with valuable additional functionality.*

*With the Organice Solution Accelerator you are up and running in no time.*

- *Save on implementation time*
- *Create project sites instantly*
- *Benefit from best practices*
- *Enhance your functionality*

## **Accelerate your engineering document management implementation**

The Organice Solution Accelerator accelerates your engineering document management implementation by automatically deploying the necessary SharePoint and Organice settings and tools, saving you substantial time in your implementation process. Sites can automatically be created with Organice Site Provisioning, making it very easy for a project manager to setup new project sites without the need to involve IT.

Organice Site Provisioning includes site templates based on best practices. These site templates include predefined items, like libraries, content types, document types, document statuses and views. The site templates automatically prepare new project sites for advanced Office integration, document numbering, reporting and optionally for Organice Transmit and Rule Based Item Security.

## Enhance your document management environment

In addition to the implementation accelerator, the Organice Solution Accelerator includes valuable additional functionality to enhance your document management environment. Organice Document Numbering can be used to automatically generate document numbers according to company standards. The document number can be configured by merging data from various sources, like sites, site collections, lists, libraries, content types, dates and counters.

With Rule Based Item Security it is possible to configure the security of an item based on rules related to its metadata, like document type or status. The value of the metadata field defines which users have access to this item. It is also possible to set permissions by combining metadata fields and values and by using 'and' & 'or' statements.

The Organice Solution Accelerator prepares sites and site collections for Cross Document Library Reporting. Reporting is based upon Reporting Server (SQL Server) in combination with the Enesys RS Data Extension.

## Specifications

The Organice Solution Accelerator is compatible with:

- WSS 3.0 SPI
- MOSS 2007 SPI

The Organice Solution Accelerator is licensed per SharePoint web front-end server.
